

Forticrete have a well-deserved reputation for innovative thinking and the Hi-Light Masonry range is testament to this. Another piece in this highly innovative system is the new Quoin external angle. Up to 25% lighter than solid masonry, the Quoin, at under 20kg fulfils all the necessary Health & Safety concerns around the issues of repetitive lifting on site. What's more, the environmental benefits of the Hi-Light system are evident in its cellular design that uses up to 24% less material than a solid block. Add to this its excellent water repellent capabilities and low rate of absorption and the Hi-Light system has well and truly got the market cornered.
